Abstract

The elementary education and middle grads are a time of grate developmental changes with the prospective to impact children for long term growth. As students' evolution through their formal school education healthy development associate with positive outcome for the society. Around 1/4th of pupil of High school pupils are dropping out from school before graduating their high school education. High number of dropouts are reflecting the society where they are living. Although there is a tendency to think more number of dropouts are having the low level of socioeconomic condition and the education level of the parents.

Keywords: Dropout, Education, Income.

Introduction

Education is basic requirement of human development. In education system we have direct cost and indirect cost. The direct cost is nothing the cost and expenditure of students in the form of donation, school fee, tuition fee and cost of books, van fee etc, are the direct cost or it is called as educational investment. In the same way indirect cost is nothing it is a time or duration spend by the student in an academic year, example physically he is spending his time in classroom instead of working or earning money somewhere else, he will be learning, it is known as indirect cost or indirect investment. Education will always associate to provide good and quality life for human beings. There are many problems in Indian education system in that school dropout is also a major issue. At present this paper was mainly focus on the school dropout's socio-economics causes and consequences. the study revealed some factors namely personal, family school and socio-economic factors are playing a significant role in life of school dropouts and is represent a staggering loss to the society. The poor people are not affordable to take admission in private sector education because their socioeconomics condition is not so good, the fee structure of the private school will be very high

and parents are not educated. If their children are dropping out from school it leads to impact on the employment, if the employee dropped out from school he will unskilled and he will be payable with low salary.

Revie of Literature

Rupon Basumatary (Dec 2012), "School dropouts across Indian States and UTs: An Econometrics study". This paper analyses the global world population is increasing, with the increasing population providing right education to right people with right time it is the key to human resource formation and also it is a big challenge. The education will not give only knowledge but it also make the mind creatively and enhance the innovation skills. However being a poverty-striven and rural based economic society, many problems will makes the children dropouts. Number of dropouts are having different kinds of reasons some of them are having poverty problems, and other are having school infrastructure, teacher training so on.

S.V.Halawar (2019) A study on school dropouts and student strength of Dharwad District of Katakana, India. This article describe that importance of education and the discrimination made by the parent's according to their socioeconomic condition's parents making admission for boy

in private sector school and for girls government sector school. parents are feel that compare to government school private school education is quality, so they get admission in private school.

Objectives

- To know the significance of parents Income level and education level.
- To Analyses the Impact of parent's socioeconomic condition to dropout students.
- To assess the association result between parent Income and Education level of parent.

Hypotheses

- There is no relationship among the parent Income level and education of parent.
- There is a relationship among the parent income level and education of parent.

Education

Education is a process of teaching, learning and it also a systematic study. It helps to acquiring knowledge, it develop the power of judging and it built decision making behavior. And it also makes the society life style smoother and systematically.

If an individual person is having education not only he works himself but he will also contribute something to society and country.

Association		Income level of parents		
		Less than 1 Lack	More than 1 Lack	Total
Education Level Of Parents	Primary Education	45	25	60
	Secondary Education	25	35	60
	Total	70	50	120

To get and assess all these circumstances and more overly to identify the Association between Income level and Parent education level Non-Parametric Test Chi-square test has taken through 120 respondents in Kalaburgi.

Less than 1 Lack		More than 1 Lack		Chi-Square
Primary Education	Secondary Education	Primary Education	Secondary Education	
13	16	11	20	13.7
Total	29	Total	31	

Association		Income level of parents		
		Less than 1 Lack	More than 1 Lack	Total
Education Level Of Parents	Primary Education	37%	20%	50%
	Secondary Education	20%	29%	50%
	Total	58%	41%	100%

The Chi-Square test calculated value will be 13.7 at (alpha) level of significance and the table value or the critical value is 3.41. here at 2 degree of freedom at 5% level of significance.

Here, Calculated value > table value

13.7 > 3.41

* There is no association or relation between Income level and education level of the parents.

Results

- Education and Income level of the parents plays a very important role for the student life.
- Out of 120 respondents 70 parents are earning less than 1 lacks and 50 are earning more than 1 lack annual.
- Among them 60 are got primary level of education and 60 were are got secondary level of education.
- The study found that there is no significance association relation between income and education level of the parents.

Suggestions

- Favouritism, making of in education system should reduce, if will reduce automatically the drop rate will improve.
- Many schemes are implemented by the State and central Government but who is need they are unaware for scheme.

- Government should open night school for the parents, who is working day they will learn night.

Conclusion

According to the study conclude that, a student who drops out of school will be impacted by their parents' income and level of education. Parents who have a good education may live a nice life and provide their children with an excellent education. Beyond the fact that attaining employability is connected to a person's own soft talents that increase employability, we might argue that a great deal of external factors may affect achieving employability, such as primarily rural and urban education, communication skills, and so forth. However, a more extensive government policy on the development of soft skills, particularly in rural education systems, is desperately needed.
